

Open Challenge: The UN-EX Theory

Author: Josh Chesher

Contact: joshchesher@gmail.com

1. Introduction

This is an open invitation to disprove the UN-EX Theory - a new model that questions the assumption that the speed of light is the universe's ultimate limit. The theory is mathematical. The challenge is open. If it fails, show us where.

2. The Premise

The UN-EX theory emerges from analysis of elliptic curves and relativistic reinterpretations.

All derivations are computationally verified and symbolically sound. It aims to push the boundaries of physics using pure math.

3. The Challenge

- Disprove it through logic, contradiction, or counterexample.
- If you break it, publish your findings.
- If not, help push it forward.

4. Why It Matters

Science belongs to everyone. Gatekeepers and elitism have no place in discovery.

If this model holds, it may reshape our understanding of time, matter, and motion.

5. Get Involved

Spread the word. Share it on Reddit, Twitter, and in academic circles.

Tag @elonmusk, @neiltyson, and anyone ready to challenge or support innovation.
